## FOUNDED IN 2002

Telecoms World is a UK based communications provider with a portfolio of voice and data services for business. These services include voice calls, call management, VoIP phone systems and internet connectivity, data networking, and mobile.

With over 20 years of experience in the hosted telecoms industry, Telecoms World has established itself as a prominent player in the voice and data market. We have forged direct relationships with leading networks and distributors, enabling us to offer a wide range of leading-edge products and services.

Our commitment to excellence has been recognised through numerous awards and an 'Excellent' review status from TrustPilot. Additionally, our sales and order provisioning team, based in the UK, ensures a seamless experience for our customers.

We take pride in our highly praised customer support team, delivering exceptional assistance and guidance.

Create a professional image to win more business

## BUSINESS NUMBERS

Choose from a wide range of memorable Local 01/02 and UK wide (08/03) numbers, plans to suit all size of businesses with instant activation

0800

### FREEPHONE 0800 NUMBERS

An 0800 number, also known as a freephone number, is a special type of telephone number that allows callers to make calls without incurring any charges. When you dial an 0800 number, the cost of the call is instead paid by the recipient of the call, typically the business that owns the number.

When a caller dials an 0800 number, they can make the call free of charge, regardless of their location within the country where the number is active. This makes 0800 numbers popular for customer service hotlines, helplines, sales inquiries, and other situations where the business wants to encourage customer communication.

0800 numbers are generally accessible from both landline and mobile phones within the country where the number is active. They can be dialed from any phone network, ensuring widespread availability and convenience for callers.

Overall, 0800 numbers provide a convenient and easily accessible point of contact for customers, clients, and the general public, allowing them to communicate without incurring call charges.

01/02

### LOCAL VIRTUAL NUMBERS

A virtual local number is a telephone number that is not tied to a specific physical phone line or location. It is a virtual or cloud-based phone number that can be assigned to a device or service, allowing calls to be forwarded or routed to any phone number, landline, mobile phone, or phone system.

Virtual local numbers are typically associated with a specific geographic location, such as a city or region. Although it is not physically tied to a specific phone line in that area, it gives the appearance of a local presence, allowing businesses or individuals to establish a local identity even if they are located elsewhere in the country.

A virtual local number is a cloud-based phone number that can be forwarded or routed to any phone or device. It offers flexibility, scalability, and cost advantages, allowing businesses and individuals to establish a local presence and manage their calls efficiently, regardless of their physical location.

## UK-WIDE 03 NUMBERS

A UK wide 03 number is a type of telephone number that is non-geographic and can be dialed from anywhere in the UK. These numbers are designed to provide a consistent, affordable, and inclusive way for people to contact businesses, or services.

03 numbers are not tied to a specific geographic location within the UK. They are not associated with any particular area code, allowing businesses to have a single contact number for customers across the country. This makes them particularly useful for businesses with a national presence or those that want to project a unified image.

03 numbers are often seen as more professional and trustworthy compared to mobile numbers. They provide a sense of business stability, signaling that the business is established and committed to customer communication. This can be advantageous for customer service helplines, sales hotlines, or any situation where companies want to project a reliable image.

[View the Numbers >](#)

0300

## NOT-FOR-PROFIT 0300 NUMBERS

NOT-FOR-PROFIT 03 numbers are also available. The number range begins 0300, designated for use by registered charities.

Calls made to 03 numbers are charged at the same rate as calls to standard landline numbers (01 or 02 numbers). They are typically included in the free minutes of mobile and landline calling packages. This helps to make contacting charities more affordable for callers.

Manage incoming business calls with ease

## CALL MANAGEMENT SOLUTIONS

Control where and when business calls are answered with our award-winning call management solutions - support customer support and influence sales

[View the solutions online >](#)

***"An incoming call is a customer's first and most important first impression of your business. We ensure that your calls are handled with care."***

See our summary of call management solutions designed to help businesses with incoming business calls - if you receive a handful of calls a month or 1000's each day our solutions are attached to any phone number in the cloud to help grow your business

### VIRTUAL RECEPTIONIST

"Thank you for calling COMPANY NAME" using the professional announcement to give callers the best impression of your business - 24/7 control of calls to give the best experience even when lines are busy or you are unable to answer the call.

### CALL QUEUING

Call Queuing is a simple system that allows your business to accept more calls, even if you're not capable of answering them straight away. Deal efficiently with call peaks by placing callers into a queue and create a professional image with comfort messages and music on hold.

### IVR SOLUTION

Interactive Voice Response (IVR), enables your customers to connect with the right person or department of your business by pressing the number buttons on their telephone keypad. Allowing you to route business calls based on what department option your customers choose.

### TIME OF DAY ROUTING

Call Routing enables you to capture all of your business calls from anywhere, on any device, 24/7. Control where calls to your business phone number are diverted to, based on the time of day and to multiple mobiles, landline phones or VoIP phone system agents.

### CALL RECORDING

"Thank you for calling COMPANY NAME" using the professional announcement to give callers the best impression of your business - 24/7 control of calls to give the best experience even when lines are busy or you are unable to answer the call.

### AGENT HUNT GROUP

"Thank you for calling COMPANY NAME" using the professional announcement to give callers the best impression of your business - 24/7 control of calls to give the best experience even when lines are busy or you are unable to answer the call.

# COMMUNICATION INTELLIGENCE

Giving your customers the flexibility to choose how they communicate with your business and the experience they receive when they interact with you provides a fantastic platform to enhance your brand and enhance customer experience

Take advantage of the latest multi-channel solutions, designed and delivered to support sales and support teams with clear communications using multiple media

## BUSINESS WHATSAPP

Typically managed from a single mobile phone, our platforms allow for multiple agents/workers to respond to clients messages and transfer conversations between departments. Offer your clients a simple method of communication with enterprise functionality to respond and interact using WhatsApp.

## A.I AUTOMATION

Businesses often identify questions or processes that can be easily handled within seconds rather than minutes using automation. Artificial Intelligence uses machine learning to control these interactions and ensure that time, resource and money is saved. AI provides businesses with the intelligence to thrive and grow!

## CRM INTEGRATION

Your customer base is the backbone of your sales and service support. A seamless integration between the CRM system and communication tools, provides all size of business with a gold standard when it comes to knowing who you are interacting with an instant view of their purchase or enquiry history.

***“With the right tools, businesses can leverage the benefits that AI can offer.***

***Not to replace human talent but to create much more space for high-level tasks and business-critical functions.”***

Gary Vaynerchuk . American entrepreneur

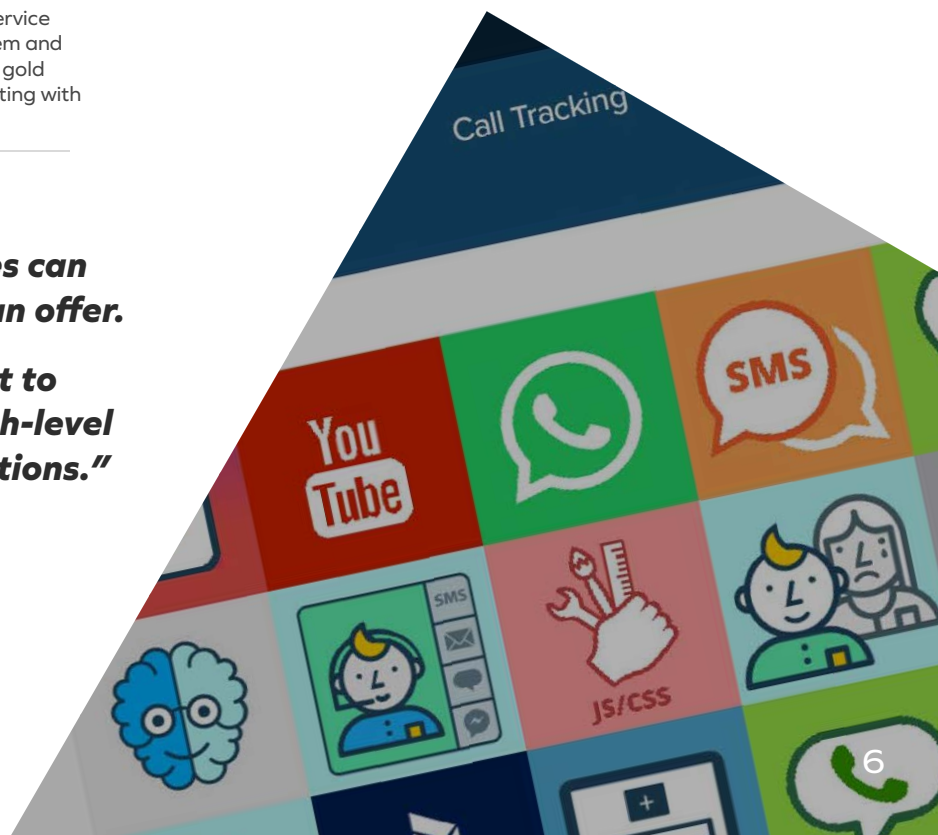

## SPEECH RECOGNITION

Using speech recognition technologies, a callers spoke word can be used to route messages to departments, answer the question without human intervention or display key customer information to handle the enquiry with understanding and care. We can turn spoken words into automation and process.

## OMNI-CHANNEL

Provide your customers with a range of communication methods so they can choose how and when they would like to be managed. Calls, chat, messaging, emails, the choice is theirs, and engagement is handled by agents/workers from a single web-based interface, all delivered through a CRM or online view for complete control 24/7.

## PHONE SYSTEMS

Hosted PBX, VoIP, Cloud-based... the list goes on. But which type of phone system delivers the functionality and cost benefits to support your business now and in the future.

### VoIP SYSTEMS

A complete phone system using the internet to deliver and receive calls in HD quality. Using a VoIP phone system is easier than ever, an online interface provides the business with instant control of calls, call handlers, call management and value-add features including reporting and call record.

### HOSTED PBX SYSTEMS

A hosted PBX system can be delivered by using a traditional PBX phone system and enabling internet based calls using SIP trunks or onboarding an entirely new web-based phone system in the cloud, and utilising SIP to make and receive calls. Both routes provide cost-saving benefits and functionality.

## ENHANCED FEATURES

Wallboard view of call handling and KPI to meet service levels

View and control call handling agents in real-time

Message, share contacts and presentations from one system

Calls handled on handsets, desktop software and mobile

Turn calls into video calls in an instant using WebRTC

### Making calls over the internet

Making calls over the internet, also known as Voice over Internet Protocol (VoIP), is a modern communication method that has revolutionised the way we connect. By utilizing the power of the internet, VoIP allows users to make voice and video calls, as well as send messages, using their internet connection instead of traditional phone lines. This technology offers numerous benefits such as cost savings, flexibility, and enhanced features.

# COMMUNICATION INTELLIGENCE

When searching for a new phone system for your business, it's essential to ask relevant questions to ensure you choose the right solution for your needs. Here are some important questions to consider:

## What are my specific communication requirements?

Assess your business needs and determine the essential features and capabilities you require from a phone system, such as call routing, voicemail, conferencing, mobile integration, and scalability.

## Is the phone system cloud-based or on-premises?

Understand the deployment options available and consider factors like cost, maintenance, flexibility, and scalability. Cloud-based systems offer convenience and scalability, while on-premises solutions provide more control but require dedicated infrastructure.

## Is the system scalable and flexible?

Consider your business's growth potential and whether the phone system can easily accommodate additional users, locations, or features as your needs evolve.

## Is the system user-friendly?

Evaluate the system's interface, ease of use, and training requirements. A user-friendly system reduces the learning curve and ensures smooth adoption by your employees.

## What integration options are available?

Determine if the phone system can integrate with other essential business tools such as customer relationship management (CRM) software, help desk solutions, or productivity applications. Evaluate the system's interface, ease of use, and training requirements.

***“Choosing the right phone system is not just about making calls, but about connecting your business to success. It's about finding a communication solution that empowers your team, enhances customer interactions, and drives productivity.*”**

***The right phone system can be a game-changer, paving the way for growth and efficient operations.”***

## WE PROVIDE THE UK'S LEADING PHONE SYSTEMS

O2 is another prominent mobile network operator in the UK, providing 4G and 5G network coverage. It offers a wide range of mobile services, including voice, data, messaging, and mobile broadband. O2 provides various plans and options suitable for individuals and businesses, with a focus on satisfaction and service quality.

EE plans from £8.49 >

## WHICH MOBILE NETWORK AND PLAN IS BEST FOR MY BUSINESS?

### Which network has the best coverage in my area?

Assess the network coverage of different mobile operators in the areas where your business operates or where your employees frequently travel. Look for a network with reliable coverage to ensure uninterrupted connectivity.

### How much data do I need for each user?

Evaluate your business's data usage needs. Consider the amount of data your employees require for email, browsing, file sharing, and any data-intensive applications. Choose a plan that offers an adequate data allowance without incurring excess charges.

### Which Voice and Text services are best for business users?

Determine the voice and text messaging needs of your business. Assess the number of minutes and text messages your employees typically use. Look for plans that offer sufficient voice and text allowances at reasonable rates.

Technical support, email, hosting security and data backup
